ACT 2 REMEDIATION TO ADDRESS RELEASES AT DRILLING and MIDSTREAM SITES

Press Release

RT Energy Services provides service to the Marcellus Shale Oil and Gas industry, to assist with managing remediation when fluid or other releases occur at drilling or midstream sites. RT has experience throughout Pennsylvania, and we can respond promptly to help manage releases from locations in Pittsburgh, Harrisburg, and Philadelphia.

There are many highly qualified firms which offer emergency response services, and offer the "brawn" to clean up specific releases. RT is frequently asked to work side by side with these firms, to offer the "brains". Don't get us wrong... We are not suggesting that emergency response companies don't know what they are doing. We have great respect for them. However, there are many situations that require in-depth knowledge and a thorough understanding of PA's regulatory requirements. That's where our brains set us apart. We work with the client and the response team to assure that the work is completed efficiently and the Statutory Cleanup Liability Protection under Act 2 of 1995 is attained after cleanup is complete. Being unaware of the best remediation approach can lead to completion of unnecessary work and increased costs.

Over the years, we have worked with all regions of the Pennsylvania Department of Environmental Protection, and our President served on the DEP Secretary's Act 2 and Brownfields Program Improvements Committee. When the DEP evaluated the statewide number of Act 2 project completions, RT had completed three times more Act 2 projects than any other environmental consulting firm in Pennsylvania. That's a lot of experience which translates into focused, efficient and cost effective service.

Release projects we have worked on include:

- Promptly remediating significant oil release, immediately impacting a stream, for a large truck maintenance firm.
- A release of No. 2 Fuel Oil, with seepage impacting a stream, requiring prompt installation of a trench interceptor system in a public street, to avoid further impact.
- Remediation of a petroleum release impacting wetlands, causing a need for excavation and removal, followed by wetlands mitigation and restoration.

The most important aspect to the Marcellus Shale industry is that many exploration and midstream operations occur on the property of others, under right of way or drilling rights agreements. The expectation of property owners is that a cleanup will be "complete", and in Pennsylvania, this almost always means that cleanup liability protection must be granted by the Pennsylvania Department of Environmental Protection, upon submittal of an Act 2 Final Report.

Equally important is to apply the most appropriate remediation steps to the site-specific contaminant release that has occurred. Using Act 2's Statewide Health Standards, or site-specific approaches, remediation should be tailored to minimize costs and minimize the environmental impact. This is particularly important in wetlands, buffer areas, or other environmentally sensitive locations as trying to clean up every bit of impact from a release is all too often not required and can cause more damages to natural resources than is necessary. At some sites, there is visual indication of impact, but testing shows that no actual active remediation is needed.

RT also offers, as we have for more than two decades, two key business advantages, which cause our clients to call time and again:

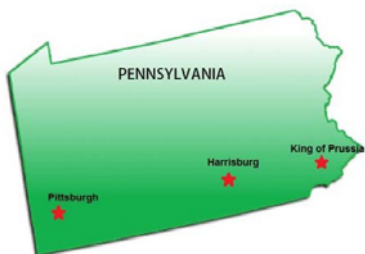

- We offer standard pricing throughout the Commonwealth of Pennsylvania.
- 24 Hour Urgent Line Service, 24/7, 365 days a year. We have your back!

1-800-725-0593

Additional RT Energy Services:

- Erosion and Sediment Control Permit Applications
- Responding To and Providing Expert Testimony When Permits or Approvals are Challenged
- Drilling Pad Inspections
- Tank Farm Containments, Upgrading and Remediation
- SPCC Plans
